First of all, marksmanship is a sport that can be performed at a high level by everyone. Successful shooters come from every demographic, socioeconomic status, and physical stature. Success in shooting is determined by how hard one works, not by how much ability someone has.

Secondly, neither sex has an advantage. In fact, in high school and collegiate competitions where men and women compete, men and women win awards in direct proportion to their numbers. Marksmanship is a skill sport. No one is born with the skills required to be a successful shooters, they are developed through dedication to the training provided by the MCJROTC instructor. In other words, each cadet has the same potential to achieve success in the sport of marksmanship.

Finally, marksmanship is a sport of control, discipline, and concentration. MCJROTC is dedicated to the marksmanship portion of its curriculum as these attributes serves our cadets in life well beyond the MCJROTC classroom. Marksmanship does an excellent job of teaching these and many other vital life skills.

Most importantly of all however, MCJROTC is dedicated to conducting marksmanship in the safest environment possible. MCJROTC instructors and cadets have an excellent safety record in regards to marksmanship training. In keeping with this dedication to safety, MCJROTC recently evaluated how its units conducted marksmanship training. The result of this evaluation was the development and fielding of essential equipment needed to conduct safe training, firing backstops.

In conjunction with Creedmoor Sports and the Civilian Marksmanship Program, MCJROTC developed a Portable Air Rifle 10 Meter Range that meets the safety requirements for use with air rifles that fire a .177 cal pellet at a muzzle velocity of less than 600 feet per second. This muzzle velocity covers most of both precision and sporter rifles. The range can be set up literally anywhere (classroom, gym, and hallway) and is easy to move. Units can use the range not only for introductory level unit training, but the ranges can also be linked together for competition events among units.

I hereby permit my son/daughter _____ to participate in MCJROTC marksmanship training. I grant this consent with the knowledge that the training will involve the firing of .177caliber air rifles. I understand that I may coordinate with the school administration to visit the range facilities in order to acquaint myself with the procedures and safety precaution being utilized.
