Computer Workstation Survey Tool Instruction

Thank you for participating in an ergonomic computer workstation assessment.

Ergonomics is the science of fitting the workplace to the worker to reduce the risk of injury. In order to reduce your risk of developing Work-related Musculoskeletal Disorders (WMSDs), it is important to use your computer in a neutral posture. This will help prevent soft tissue WMSDs, such as Carpal Tunnel Syndrome and Tendonitis. The following illustration is a guide to setting up your computer workstation. The neutral posture is the optimal body position, which provides the greatest strength and control and minimizes stress. Even a neutral posture can be fatiguing if held all day, therefore micro-changes in posture and stretching are recommended (see page 2).

For more information or to report pain or discomfort you feel is associated with your job, please contact your Supervisor or Safety Officer who can refer you as needed to the Industrial Hygienist and/or Occupational Health Provider/Clinic.

Neutral Posture for Computer Use

The information in the figure accommodates 90% of the population. Special considerations may be necessary some workers. Additional guidance can be found on the Navy Ergonomics Program Web Page http://www.navfac.navy.mil/safety/site/ergo/ergonom.htm

Tip: 1) Taking 20 second micro-breaks throughout the day to refocus your eyes will reduce fatigue at the end of the day. 20/20 rule: for every 20 minutes of work, rest the eyes 20 seconds.

(Note: Page 1 and 2 are to be left with the employee)
