Y	N	Minimum and maximum recommendations accommodate 90% of the population. Special considerations may be necessary for the extremes and users with special medical conditions	Possible Solutions Check if recommended
		Work Surface	
☐	☐	Is there adequate clearance beneath the workstation for the user to get close enough to the task, maintain freedom of movement, and not come into contact with obstructions such as table legs, filing cabinets, etc? (Height clearance for legs minimum 25", depth clearance for knees minimum 17") *Action*: Rearrange workstation, remove clutter/obstructions.	Different work surface Raise or lower work surface
☐	☐	Are the computer monitor and keyboard in alignment with (directly in front of) the user? *Action:* Rearrange workstation.	
☐	☐	Is the work surface with the keyboard positioned at seated elbow height? Seated elbow height is measured with the feet resting comfortably on the floor (or a footrest) and the back positioned against the backrest. The upper arms are close to the sides with elbows at a 90° angle. The seated elbow height is the distance from the floor to the bony protrusion on the elbow. *Action:* Adjust work surface, keyboard tray, or chair. If feasible, reposition a portion of the work surface used exclusively for computer tasks.	Height adjustable keyboard tray Leg lifters for desk Different work surface
☐	☐	Is the mouse or other input device located at the same height as the keyboard (at elbow height) within close reach? When keying or using the mouse, the upper arms should be close to the body, elbows approximately 90 degrees with forearms parallel to the floor and wrists straight.	Mouse bridge or platform Keyboard tray Alternative or wireless pointing device
☐	☐	Are frequently used support equipment / materials (telephone, documents, references) within 14" to 18" with occasionally used items within 22" to 26"? Two-handed reach distances are shorter than single-handed reaches and reaches for items over 10 lbs. should be performed standing. *Action:* rearrange workstation.	
		Monitor	
☐	☐	Is the monitor located about arm's length away from the user (min. 15.7")? Monitor distance depends on the user's eyesight and possible corrective vision use, and monitor depth. *Action:* Rearrange workstation.	Suggest employee see personal eye care specialist Larger work surface
☐	☐	Is the monitor height (measured from the top row of characters on the screen) at a height equal to or 20° below the user's seated eye height (measured from the corner of the eye when a person is looking straight ahead)? The monitor should be located so the user does not have to bend the neck back or forward to see clearly. *Action:* Elevate or lower monitor. If necessary, elevate chair and provide footrest.	Monitor risers / arm
☐	☐	Are the monitor images clear and stable, free of dust or glare (reflections)? *Action:* Turn off overhead lights, reposition blinds, or shield monitor to the side / top to assess glare. Rearrange workstation so that monitor is perpendicular to light source. Change lighting / blinds during the day to reduce glare.	Add task lighting Reduce overhead lighting (removing bulbs) Glare screen
		Accessories	
☐	☐	Is the employee comfortable while receiving phone calls during the day, which require him/her to type or write while speaking?	Telephone headset
☐	☐	Does the employee type in a neutral posture without using the wrist rest? A wrist rest should be used for resting; the arms should float above the keyboard in a neutral posture (straight wrists) when typing. The keyboard should be flattened or at a negative tilt as close to the user as possible.	
☐	☐	If the worker references documents while typing, are they located in a holder next to, in front of, or at an equal distance to the monitor and not resting flat on the desk? Document position depends on eyesight, document and screen font, and task parameters.	Rearrange workstation Document holder
☐	☐	Is the worker able to get up from the computer on a regular basis (typing for less than 6 hours a day)?	Sit/stand workstation
☐	☐	Is the input device (mouse) appropriate for the task and is the user operating it with minimal force? Thumb operated trackballs are typically not recommended for extended daily use.	Alternative input device Input device sized to the user
