95. If multiple batteries, provide configuration, e.g. parallel and/or series:?

96. What was the short circuit current *(amps)*?	☐ Check if Unknown
97. What was the DC voltage?	☐ Check if Unknown
98. What was the duration of exposure *(in seconds)*?	☐ Check if Unknown

99. Working Mode *(Select one)*:

- ☐ Electrically safe working condition *(non-energized work, lockout-tagout procedures followed)*
- ☐ Testing and/or troubleshooting *(i.e., using a meter in multiple readings, no lockout/tagout system)*

SECTION IV - SUB-RF (1 Hz - 3kHz) Including 400 Hz Power Systems and Welding

100. What was the frequency?

101. What was the voltage?

102. What was the short circuit current *(amps)*?	☐ Check if Unknown
103. What was the duration of exposure *(in seconds)*?	☐ Check if Unknown

104. Working Mode *(Select one)*:

- ☐ Electrically safe working condition *(non-energized work, lockout-tagout procedures followed)*
- ☐ Process of de-energization and zero energy verification *(one time use of meter in process of de-energizing the system lock/tag is on)*
- ☐ Testing and/or troubleshooting *(i.e., using a meter in multiple readings, no lockout/tagout system)*
- ☐ Energized electrical work *(i.e., components are being replaced and manipulated during energized work)*

105. Did the mishap occur because of a welding incident? ☐ YES ☐ NO

106. Wave form - AC or DC welder?

107. What was the open circuit volt *(provide a number)*?

108. What were the settings on the welding machine?

109. What is the max current for the welding machine?

110. Describe the starting circuit to strike the arc.

SECTION V - RF (3kHz - 100MHz)

111. What was the type of RF system *(i.e., radar or communications)*?

112. What was the system frequency?

113. What was the system voltage?

114. What was the Power available *(in watts)*?	☐ Check if Unknown

SECTION VI - PHOTVOLTAIC

115 Describe the system *(i.e., tactical installation, roof top, photovoltaic, etc.)*?

116. What was the system voltage?

117. What was the power output *(in watts)*?
