PART B

Part B is to be completed for electrical mishaps involving direct current, capacitors, batteries, sub-radio frequency (1Hz - 3kHZ), welding, radio frequency (>3Khz), photovoltaic, or wind generators.

Refer to the electrical Hazard Classification Tool for assistance in completing this form available at: http://apps.ctc.com/esafe-pro/2/index.html

84. Select one

- ☐ DC - Go to Section I
- ☐ Capacitor - Go to Section II
- ☐ Batteries - Go to Section III
- ☐ Sub-RF - (1Hz - 3kHZ) including 400 Hz power system and welding - go to Section IV
- ☐ RF (3Hz - 100MHz) - Go to Section V
- ☐ Photovoltaic - Go to Section VI
- ☐ Wind - Go to Section VII

SECTION I - DC

85. Was electric current de-energized and verified? ☐ YES ☐ NO

86. What was the DC voltage? ☐ Check if Unknown

87. What was the short circuit current? ☐ Check if Unknown

88. What was the duration of exposure *(in seconds)*? ☐ Check if Unknown

89. Working Mode *(Select one)*:

- ☐ Electrically safe working condition *(non-energized work, lockout-tagout procedures followed)*
- ☐ Process of de-energization and zero energy verification *(one time use of meter in process of de-energizing the system lock/tag is on)*
- ☐ Testing and/or troubleshooting *(i.e., using a meter in multiple readings, no lockout/tagout system)*
- ☐ Energized electrical work *(i.e., components are being replaced and manipulated during energized work)*

SECTION II - CAPACITOR

90. What was the capacitor value *(Capacitance in Microfarads)*? ☐ Check if Unknown

91. What was the voltage *(AC or DCV)*? ☐ Check if Unknown

92. Working Mode *(Select one)*:

- ☐ Electrically safe working condition *(non-energized work, lockout-tagout procedures followed)*
- ☐ Process of de-energization and zero energy verification *(one time use of meter in process of de-energizing the system lock/tag is on)*
- ☐ Testing and/or troubleshooting *(i.e., using a meter in multiple readings, no lockout/tagout system)*
- ☐ Energized electrical work *(i.e., components are being replaced and manipulated during energized work)*

SECTION III - BATTERY

93. What was the type of battery and number batteries? *(Select one or more)*:

- ☐ Lead Acid — Number of batteries:
- ☐ Lithium ion — Number of batteries:
- ☐ Other *(specify)*: — Number of batteries:

94. Describe the battery system including manufacturer and number of batteries?
