5.13. PERSONNEL SECURITY (PS)

☐ 5.13.1 Controls are implemented/maintained to ensure that individuals occupying positions of responsibility within organizations (including third-party service providers) are trustworthy and meet established security criteria (including NNPI) for those positions.

☐ 5.13.2 Controls are implemented/maintained to ensure that NNPI and information systems are protected during and after personnel actions such as terminations and transfers.

☐ 5.13.3 Controls are implemented/maintained to employ formal sanctions for personnel failing to comply with organizational security policies and procedures regarding NNPI.

5.14. RISK ASSESSMENT (RA)

☐ 5.14.1 Controls are implemented/maintained to periodically assess the risk to operations (including mission, functions, image, or reputation), organizational assets, and individuals, resulting from the operation of information systems and the associated processing, storage, or transmission of NNPI.

5.15. SYSTEM AND SERVICES ACQUISITION (SA)

☐ 5.15.1 Controls are implemented/maintained to allocate sufficient resources to adequately protect information systems with regards to NNPI processing needs.

☐ 5.15.2 Controls are implemented/maintained to employ system development life cycle processes that incorporate NNPI information security considerations.

☐ 5.15.3 Controls are implemented/maintained to employ necessary software usage and installation restrictions regarding NNPI processing.

☐ 5.15.4 Controls are implemented/maintained to ensure that third-party providers employ adequate NNPI security measures to protect infor applications, and/or services outsourced from the organization.

5.16. SYSTEM AND COMMUNICATIONS PROTECTION (SC)

☐ 5.16.1 Controls are implemented/maintained to monitor, manage, and protect organizational communications (i.e., information transmitted or received by information systems) at the external boundaries and key internal boundaries of the information systems processing NNPI.

☐ 5.16.2 Controls are implemented/maintained to employ architectural designs, software development techniques, and systems engineering printhat promote effective NNPI security within information systems.

5.17. SYSTEM AND INFORMATION INTEGRITY (SI)

☐ 5.17.1 Controls are implemented/maintained to identify, report, and correct information and information system flaws affecting NNPI related controls in a timely manner.

☐ 5.17.2 Controls are implemented/maintained to provide protection from malicious code at appropriate locations within information system processing NNPI.

☐ 5.17.3 Controls are implemented/maintained to monitor information system security alerts and advisories for NNPI and take appropriate actions in response.

5.18. U-NNPI SPECIFICATIONS (U-NNPI SYSTEMS ONLY)

☐ 5.18.1 Controls are implemented/maintained to ensure a FIPS-140-2 certified encryption is used for data in transit on information systems used to process up to U-NNPI.

☐ 5.18.2 Controls are implemented/maintained to ensure a FIPS-140-2 certified encryption is used for data at rest on mobile client devices processing up to U-NNPI.

☐ 5.18.3 Controls are implemented/maintained to ensure an FIPS-140-2 certified encryption is implemented for all removable IT media (including peripheral electronic storage) containing up to U-NNPI. IT media includes, but is not limited to, optical media (such CDs or DVDs), universal serial bus (USB) thumb drives, and external hard-drives.

☐ 5.18.4 Controls are implemented/maintained to ensure that IT equipment, media, electronic displays, and other IT items for U-NNPI are marked or labeled per chapter 2 of OPNAVINST N9210.3.

☐ 5.18.5 Controls are implemented/maintained to ensure that U-NNPI IT media and equipment are disposed of per chapter 6 of OPNAVINST N9210.3.

☐ 5.18.6 Controls are implemented/maintained to ensure that users are prompted to accept the following terms during the initial logon for each session that includes access to U-NNPI:

You are approved to process up to and including unclassified naval nuclear propulsion information (U-NNPI) on this system.

U-NNPI is not for release to foreign nationals (NOFORN) and has special handling requirements. U-NNPI is subject to special export controls, and each transmittal to foreign governments or foreign nationals may be made only with the approval of the Director, Naval Nuclear Propulsion Program (CNO (N00N)). *It is your responsibility to protect U-NNPI from disclosure to individuals without a need-to-know.*

You are not approved to process classified information on this system.

5.19. CLASSIFIED NNPI SPECIFICATIONS (CLASSIFIED NNPI SYSTEMS ONLY)

☐ 5.19.1 Controls are implemented/maintained to ensure a NSA Type 1 certified encryption is implemented for data in transit or protected distribution systems are used per the requirements of NSTISSI No. 7003 of 13 Dec 96, Protective Distribution Systems (PDS) on information systems used to process classified NNPI.

☐ 5.19.2 Controls are implemented/maintained to ensure a FIPS-140-2 certified encryption is used for data at rest on mobile client devices processing classified NNPI until an NSA Type 1 certified encryption product for data at rest is available, at which time the NSA Type 1 certified encryption product shall be used for data at rest on mobile client devices processing classified NNPI.
